**Note:** start immediately with creating the culture, because the fruit flies in the included tube live very short!

### **Fruit Flies Growing instruction**

#### **Necessities:**

- Growing kit; (included)
- Bag of nutrition soil; (included)
- Bag of wool; (included)
- Tube with about 50 fruit flies; (included)
- Measuring cup with 50 cc of hot water;
- Something to stir with.

#### **instructions:**

- 1) Prepare and make all equipment ready to use;
- 2) Put the nutrition soil in the growing kit container;
- 3) Add 50 cc of hot water (or more if required);
- 4) Stir well (make sure it is not too thin and not too thick);
- 5) Put the wool above;
- 6) Put the tube fruit flies in the prepared culture kit;
- 7) Put the lid back.
- 8) Put the kit in a warm place in the house. It may be 25-30 degrees.

**Depending on the temperature, the fly come out after 2 to 4 weeks after placement (at 25 degrees or higher).**
