Instructions

Ant's Kingdom Cube Antfarm

*Thank you for ordering
the Ant Farm Cube*

An excellent choice!

Installation

In addition to the information on our website we gladly provide you with some extra instructions to start using your Cube Ant Farm.

Have you ordered a colony? If so, than we provide a free hose and coupler piece. Our advice is to make a connection as you can see on the pictures. If you also ordered a feeding box or arena, then our advice is to connect the colony close to the arena. The ants then get used to transport their waste to the arena and get their food from the arena. The colony will usually move to the gypsum in a later phase (if the colony is big enough) and then they have already become pretty accustomed to the use of the arena.

Patience

Culturing a colony requires much patience. So keep in mind that it may take a long time

before the ants begin a move to the nest gypsum part. Think of this rather in months than in days or weeks. Keep the colony tube well protected (dark), for example with a piece of cloth, cardboard or the foil or protection sleeve that are available on our website. If the the colony is moved to the gypsum part, our advice is to leave the nest (test tube) connected several weeks at least as “backup” nest for your colony.

Moisture

The gypsum is pretty easy to keep a bit moist. You can spray or pour over water on a part of the gypsum in the Cube. You will see that the gypsum colours a bit darker where the water is moving. Make sure that one or two rooms are a bit moisture this way and check on this every few weeks. Since the cube is properly sealed, moisture remains for a long period, sometimes

several weeks. That's why you shouldn't make it too wet and check regularly. Condensation indicates that it is too wet, in that case add less moisture, ventilate more and/or remove condensation.

Maintenance

If it becomes too humid or mold has formed in your Cube, you can clean the Cube completely by gently tapping out the plaster. Do this after first removing the lid, sealing caps and connecting materials. Place a cloth under the Cube, hold the Cube upside down and gently tap out the plaster so that it ends up on the cloth. Then you can clean everything well and/or let it dry.

We wish you lots of fun (and patience) with this new hobby and if there are any questions, please feel free to contact us by email.
